

Flexible Wall Washer Series

DMX White High-Efficacy

Features

Our FWW is an economical, high performance DMX White Top-Bend Flexible Wall Washer in a compact form that offers multiple beam angles for maximum customization.

High transmittance polycarbonate lens with grazing angles in 20°, 30°, 40°, 60°, 25°x35° and 15°x60°.

Slim size and high-efficacy up to 117lm/W using high-power 3030 LED. The FWW is Pixel controllable by DMX signal with smart IC TM512ACE designed on board.

Uniform brightness and color up to 5M [16.4ft.] run length. On-field cutting and assembly for desired length. IP67 for indoor and outdoor usage.

Complete installation accessory options including adhesive tape, clip, aluminum channel, bracket, and rotating bracket. Environmentally friendly, high-grade appearance, soft bend flexibility, and high weather resistance, using silicone material. 50,000 hours lifespan, and 3 years warranty.

Application

Ideal for indirect lighting applications for grazing, wall washing and architectural facades, making contours and patterns more stereoscopic and vivid. Perfect for hospitality, landscape, and architectural features.

Note:

- Luminous flux for CCT 2700K/3000K is 10% lower, for CCT 6500K is 5% higher, compared with 4000K.
- Energy efficiency class of regulation (EU)2019/2020 is E(CRI80) and F(CRI90) for 4000K, it varies depending on CRI and CCT.
- Milky silicon rubber tube and transparent silicon potting glue, are standard configuration, extra heat sink is not necessary with self-cooling capacity.
- 3M 604A red adhesive tape attached on backside, is standard configuration; 200mm[0. 6in] length of double insulated white silicone cable at both ends, with UL3132 5pins core wire (black: +, white: -, red: A, blue: B, green: PI), is standard configuration. (The black and white wires are AWG20, others are AWG22)
- Power maintenance rate=actual measured power in a certain length/(a same certain length*actual measured power in 1M[3.28ft.] length); Brightness maintenance rate=actual measured brightness on the tail section in a certain length/actual measured brightness on the first section in a same certain length. (Generally, there are few cases of full power operation for mixed-color like RGB/RGBW/RGBWCT/RGBWCCT.)

Assembly

Self-Processed Version (the cap with bigger size than the main body)

 Front Cap End Cap	Following the mark line for cutting by scissors. 	Peel off the silicone jacket on the top side by 3mm [0.12in.] length and exposure the solder pad. 
Solder the cable to the solder pads on top side of the strip. 	Fill the front cap with silicone glue and seal to the LED strip. 	Fill the end cap with silicone glue and seal to the LED strip. 

(1) adhesive Tape

① Peel off the release paper of 3M tape.

② Stick and fix the LED strip to the mounting surface.

(2) bracket & Aluminum Channel & Screw
Or
(3) bracket & Aluminum Channel & Screw
& Cover & Cap

Fix the bracket to the mounting surface by screw. ② Fix the strip to the aluminum channel by adhesive tape.
③ Fix the cover and the cap to the aluminum channel by screw. ④ Clip the aluminum channel to the bracket.

(4) 120° rotatable Bracket & Aluminum Channel & Cover & Cap & Screw

Fix the bracket to the mounting surface by screw. ② Fix the strip to the aluminum channel by adhesive tape.
③ Fix the cover and the cap to the aluminum channel by screw. ④ Clip the aluminum channel to the rotatable bracket.
